| Receipt Date: | $2 / 15 / 2019$ |
| Test Date: | $02 / 19 / 2019$ |

## Cannabinoid Profile

Percentage data represents weight percentage of sample as received by MCR Labs.
THCa is converted to THC by heat. To find the maximum theoretical amount of THC in a sample, we add the amount of THC present in the sample to the amount of THC that can be created from THCa by the formula:

Max THC $=$ THC + THCa * 0.877
The maximum theoretical amount of CBD in a sample is calculated from CBD and CBDa in a similar fashion.
This report and all information herein shall not be reproduced, except in its entirety, without the expressed consent of MCR Labs. Results may vary. Results are only for the samples supplied to MCR Labs.
